

West Sussex Child Health Profile 2018

The West Sussex Child Health Profile 2018 is now [available](#).

The profile brings together a wide range of data relating to the health of children in West Sussex. The profile can be used to:

View data relating to the population and health of children in West Sussex using **local geographies** (e.g. Children and Family Centre areas, Integrated Prevention and Earliest Help (IPEH) Hubs, District and Boroughs, Clinical Commissioning Groups (CCGs) etc.)

Explore **trends** to identify whether an indicator has improved, become worse or stayed the same.

Compare two different geographies and **benchmark** against the national and/or local picture.

Comments, questions and feedback can be directed to:

West Sussex Public Health and Social Research Unit

The profile presents data in 5 themes:

1. Population

Demographic data about the local child population, such as mid-year estimates, population projections, ethnic diversity etc.

2. Deprivation

Includes information on topics such as child poverty, family homelessness, benefits, and the indices of deprivation.

3. Births

This section includes data on the number of births, characteristics of the mother, birth weight and teenage conceptions.

4. Health and wellbeing

Contains data on topics such as: childhood obesity, immunisations, breastfeeding, smoking and mental health and wellbeing.

5. Education, attainment and work

Information on educational attainment (such as school readiness), free school meals, absence and exclusions.
