West Sussex Children's Workforce JSNA Data Profiles:

Background: This data profile provides information on progress on health and other performance indicators. It has been developed to support the performance management of the West Sussex Health4Families Programme (H4FP), and Ofsted inspection requirements.

The profile enables you to look at individual children and family centres, or groups of centres, and to compare the performance of two different centres/groups at a time. Note: not all data are available at all geographies

The data has been collated by the West Sussex Public Health and Social Research Unit working with colleagues in the NHS and West Sussex County Council. It will be updated annually. The inclusion of further indicators, some outlined in this profile, will be considered at the next refresh. Should you need further information, have suggestions or comments please email: jsna@westsussex.gov.uk

Next release: Winter 2017

To download the profile please visit the [West Sussex JSNA website](#)

What data is included?

Where possible data are provided for each individual Children and Family Centre (CFC). Where this information is not available or where the numbers are very small, data are shown for groups of centres or for larger geographical areas such as local authorities or Clinical Commissioning Groups. Regional and national figures are included where available.

The profile is split into 6 broad categories (population, family structure, health indicators, birth and early years, deprivation and the early years foundation stage) and includes:

Population	Family Structure	Health Indicators	Birth and Early Years	Deprivation	EYFS
<ol style="list-style-type: none"> 1. Geographies 2. Overall population 3. Population of 0-4 year olds 4. Ethnicity - 0-4 year olds 5. Proficiency in English (relates to 3-15yr olds) 6. Tenure (relates to 0-9 yr olds) 	<ol style="list-style-type: none"> 1. Family Size (families with a 0-4 year 2. Couple/non-couple households (with 0-4yrs) 3. Census 2011 data - lone parents 4. Lone parent families on low income 	<ol style="list-style-type: none"> 1. Breastfeeding 2. Childhood Obesity 3. Oral Health 4. Mental Health incl. Post-Natal Depression 5. Smoking in Pregnancy 6. Immunisations 7. Emergency Admissions (0-4 years) 8. Sudden Infant Death Syndrome (pooled 2005-2014) 	<ol style="list-style-type: none"> 1. Births 2. Births to women under the age of 20 3. Estimated number of teenage mothers 4. Teenage conceptions (district and county level) 5. Low birth weight 6. 0-4 year olds with day-to-day activities limited 	<ol style="list-style-type: none"> 1. Index of Deprivation and Income Deprivation Affecting Children Index (IDACI) decile 2. % of households deprived in 3 or more measures (2011 Census) 3. 0-4 year olds in workless households 4. Child Poverty 	<ol style="list-style-type: none"> 1. % of children "good level of development" 2. Performance gap between lowest scores and median score
